# Stocks of Grains

## in All Positions

April 24, 1961

### RECORD CORN, WHEAT AND SORGHUM GRAIN STOCKS

Stocks of corn, wheat and sorghum grain in all positions on April 1 continued at record levels with corn stocks of 3,649 million bushels increasing 8 percent above the previous record of a year earlier. Wheat stocks of 1,706 million bushels continued to establish a record April 1 level for the third successive year. Sorghum grain stocks of 859 million bushels recorded a sharp 15 percent increase over the previous record holdings of a year earlier. Oats stocks at 559 million bushels were 15 percent above last year but were only slightly above average. Barley stocks were about the same as last year but rye stocks were sharply higher. Holdings of soybeans declined from the level of the previous year but flaxseed stocks increased sharply over the previous April. Stocks of feed grains--corn, oats, barley and sorghum grain--totaled 141 million tons, nearly a tenth above the previous record April 1 stocks of 129 million tons in 1960.

Wheat stocks in all storage positions April 1 were a record for the third consecutive year. These holdings at 1,706 million bushels were 9 percent above a year earlier and 66 percent above average. Stocks of 258 million on farms show a greater percentage increase than stocks in commercial storage. Disappearance of wheat from all positions during the January-March quarter was a record 362 million bushels, up sharply from the 314 million during the same quarter a year ago, and reflecting the heavy export movement.

Stocks were above a year earlier in all major producing wheat States except the Pacific Northwest where 1960 production fell below the preceding year. Nearly eight-tenths of the United States stocks were Government owned or under price support.

Rye stocks of 20.1 million bushels in all positions April 1 were up 44 percent from the near average level of a year ago. There was a sharp increase in both farm and commercial positions. Disappearance during the January-March quarter was a relatively low 5.5 million bushels. About four-tenths of the rye stocks were Government owned or under price support.

Corn stored in all positions on April 1 reached a new high of 3,649 million bushels, 286 million bushels more than the previous record in April 1960. Stocks in off-farm positions were 20 percent larger than last year while farm stocks increased one percent. Corn in interior mills, elevators and warehouses totaled 897 million bushels, 18 percent above a year earlier. Corn owned by or under loan to the Government comprised 91 percent of the off-farm stocks of

GrLg 11-1 (4-61)

Crop Reporting Board  
Washington, D. C.

nearly 1,580 million bushels. Farm stocks totaled 2,070 million bushels of which 34 percent were under CCC loan compared to 27 percent for April 1 last year. Disappearance from all storage positions during the January-March quarter was a record 1,051 million bushels, 2 percent above the previous high for the same quarter last year.

Oats stored in all positions totaled 559 million bushels, 15 percent above the small holdings last April and about equal the average. April 1 farm stocks at 483 million bushels were up 14 percent and the 76 million bushels in off-farm storage was nearly a fourth larger than a year ago. Oats under loan to or owned by CCC accounted for less than a tenth of the total stocks. Disappearance of oats during the first 3 months of 1961 was 292 million bushels, slightly above the 285 million bushel disappearance for the same period in 1960 but otherwise the lowest for this quarter since records were started in 1944.

Barley stocks in all storage positions on April 1, at 245 million bushels, were nearly the same as a year earlier but about a third above average. Farm stocks were estimated at 126 million bushels, 5 percent larger than a year earlier but off-farm holdings were 5 percent below those of last April. About 44 percent of the April 1 stocks were owned by or under loan to CCC this year compared with 48 percent a year ago. Disappearance of 110 million bushels from all storage positions during the January-March quarter this year was second only to the record 116 million bushels disappearance for this quarter last year.

Sorghum grain stocks in all positions totaled 259 million bushels, 15 percent above a year earlier and a record high for April 1. Off-farm stocks, at 751 million bushels, were up 18 percent from April 1960. Farm holdings were 108 million bushels, 3 percent less than the amount stored on farms last April. About 94 percent of the off-farm stocks were owned by or under loan to CCC. Disappearance during the first quarter of 1961 totaled 175 million bushels, substantially above the 130 million bushels for the same period last year.

Soybean stocks in all storage positions on April 1 totaled 264 million bushels, down about 14 percent from April 1, 1960 but still the third highest of record for the date. The reduction from last year was due entirely to the sharply lower farm stocks as the off-farm stocks were 15 percent above a year earlier.

April 1 stocks indicate a disappearance during the 6 month period October 1960 - March 1961 of 318 million bushels from a supply of 582 million bushels (carryover of 23.2 million plus production of 558.8 million bushels). During the period 218 million bushels were processed for oil and about 85 million bushels were exported. In addition some soybeans were fed, a quantity of new crop beans were crushed prior to October 1, and there is always some loss.

Flaxseed stocks in all storage positions on April 1, at 15.4 million bushels were more than 50 percent above the record low stocks of 9.8 million bushels a year ago. Current stocks indicate a disappearance during the period July 1960-March 1961 of 18.7 million bushels from a supply of 34.1 million bushels (carryover of 3.0 million plus the 1960 production of 31.1 million bushels). During the period 14.3 million bushels were processed and exports totaled 3.4 million bushels.
